1 Informes de la comunidad de Madrid

Actualizado diariamente, este documento se visualiza mejor aquí.

Datos de la situación de la infección por coronavirus en la Comunidad de Madrid.

Nos descargamos los datos, agrupamos, y calculamos:

- Gráfico de seguimiento.
- Muertes medias diarias, últimos 7 días.
- Muertes medias diarias desde que la comunidad de Madrid publica datos.

casos_españa_estimados = 1257.0767685530882

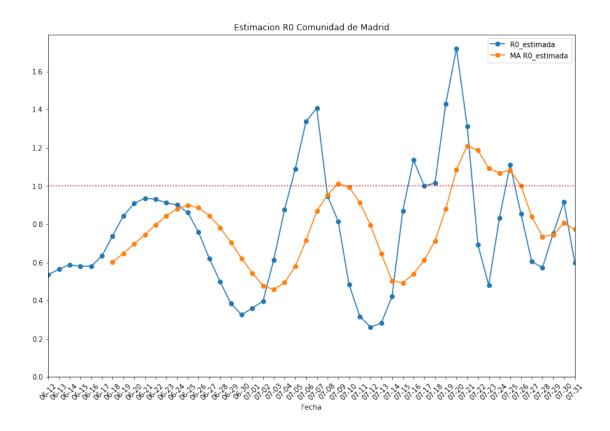

9.0 15.0

 $RO_{estimada} = 0.6$

Considerando solo los datos de Madrid, estimamos el R0 a partir del n^{o} de muertos (considerando que el n^{o} de muertos es una combinacion lineal del n^{o} de enfermos), por lo que es posible calcular el ratio igual.

Para calcular el R0, sacamos la suma de muertos de la última semana, entre la suma de muertos de la semana anterior.
